

# Toner TA-10

## **GRAIN REFINER, ACTIVATOR**

Toner TA-10 is a grain refiner used in the rinse stage prior to zinc phosphatizing of metals. TA-10 tightens crystal formation which in turn minimizes heavy coatings when not required. Non-titanium technology.

Toner TA-10 is also an activator which promotes coatings on difficult surfaces of both ferrous and non-ferrous metals. Highly effective on higher alloy metals.

Toner TA-10 enhances finished product quality by providing a wider window of process capability and repeatable coatings.
